DETAILED ACTION

Allowable Subject Matter

Claims 1-39 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art references, Belt et al, US Patent 6,774,934 and Matsuo, US Patent Application Publication 2003/0179890 do not disclose nor suggest the features of independent claims 1, 19, 31, 35, 39 and 40. Specifically, Belt and Matsuo disclose methods and apparatuses for determining the direction of an acoustic sound source using a plurality of microphones. Each reference calculates a correlation function (element 7 of Belt and element 109 of Matsuo) to determine the direction of the sound source. However, there is no disclosure or proposal to rank possible time delays between two acoustic signals, map each microphone sample to a sub-surface of potential acoustic source locations, and calculating a weighted value of cells in a boundary surface which intersects each of a plurality of sub-surfaces, as claimed in claims 1, 35 and 40. As to claims 19 and 31, the prior art references of record do not specify mapping the microphone samples to a cone of potential acoustic source locations, as required by the claims. Regarding claim 39, Belt and Matsuo do not disclose calculated a weighted value on each of a plurality of cells of a common boundary surface the weighted value on each cell being indicative of the likelihood that the acoustic source lies in a bearing direction passing through the cell.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
